

Uric Acid Diet Guide

Curated by Dr. Sourav Sarkar | Bongdoc

This diet guide is specially crafted for individuals with high uric acid levels. Proper dietary choices can help manage uric acid levels and prevent complications such as gout, joint pain, or kidney issues.

Things You Can Take:

- Complex Carbohydrates:

Brown rice, oats, atta roti

- Vegetables (Low purine):

Bottle gourd, ridge gourd, raw papaya, cabbage, bitter gourd

- Fruits:

Apple, pear, papaya, guava (avoid overripe or sugary fruits)

- Fluids:

Drink 3-3.5 liters of water per day

Lemon water, coconut water, barley water

- Low-fat dairy:

Skimmed milk, plain yogurt

- Nuts:

5-6 soaked almonds or walnuts daily

- Fish (limited):

Rohu/katla (non-fatty fish), only 2-3 times a week in small quantity

Things to Restrict / Avoid:

- High Purine Animal Products:

Mutton, beef, pork, organ meats (liver, kidney, brain)

Uric Acid Diet Guide

Curated by Dr. Sourav Sarkar | Bongdoc

- Certain Seafood:

Prawns, sardines, anchovies, mackerel

- Alcohol:

Strictly avoid beer and hard liquor

- Sugary Beverages:

Soft drinks, packaged fruit juice, glucose drinks

- Vegetables (limit only in excess):

Tomato, spinach, mushroom, cauliflower

- Pulses & Legumes:

Green peas, chana dal, rajma, urad dal, masoor dal (occasionally allowed)

- Junk Food:

Deep fried snacks, bakery items, processed foods

Final Tips from Dr. Sourav Sarkar:

- Drink plenty of water throughout the day
- Avoid crash dieting or fasting, as it can spike uric acid
- Maintain a healthy weight and avoid obesity
- Regularly monitor your uric acid levels if you have a history of gout or kidney stones
- Walk 30 minutes daily and reduce stress

Quote: 'Uric acid is not your enemy if you eat smart and live right. Water is your best friend. Avoid excess. Embrace balance.'
